## Engineering firm kits out rugby club

PLAYERS at Albert Park Rugby Club in Widnes have kicked off the new season in style – thanks to a £2,000 donation in the shape of a new kit from Hutchinson Engineering.

They are hoping that the kit, together with some new talent on the pitch, will help them finish the 2011/2012 season in a top of the table position.

Last year the Division One club finished mid-table but players Chris Lamey and Matthew Burgess – both employees of Hutchinson Engineering in Widnes – have their sights set much higher.

Chris said: “Our new kit with the Hutchinson Engineering branding is fantastic and we are proud to see the club looking so professional.

“It’s still early days but we are looking forward to this season with enthusiasm and optimism, and we are really grateful for the help and support from our boss.”

Dean Drinkwater, Managing Director of Hutchinson Engineering, a 30-year-old company which specialises in the design and manufacture of mobile telephone masts and wind turbine monopoles, said:

“It’s a pleasure to support something which means so much to the lads at Hutchinson’s – and to the wider Widnes community. Last year we kitted the players out with hooded tops and this year we have sponsored the strip.

“The players look well turned out – and we hope that the kit will bring them some luck as the season progresses.”
